

Presenting Data in Tables and Charts

Categorical Data Are Summarized By Tables & Graphs

Organizing Categorical Data: Summary Table

- A **summary table** indicates the frequency, amount, or percentage of items in a set of categories so that you can see differences between categories.

| Banking Preference? | Percent |
|---------------------------------|---------|
| ATM | 16% |
| Automated or live telephone | 2% |
| Drive-through service at branch | 17% |
| In person at branch | 41% |
| Internet | 24% |

Bar and Pie Charts

- Bar charts and Pie charts are often used for categorical data.
- **Length** of bar or **size** of pie slice shows the **frequency** or **percentage** for each category.

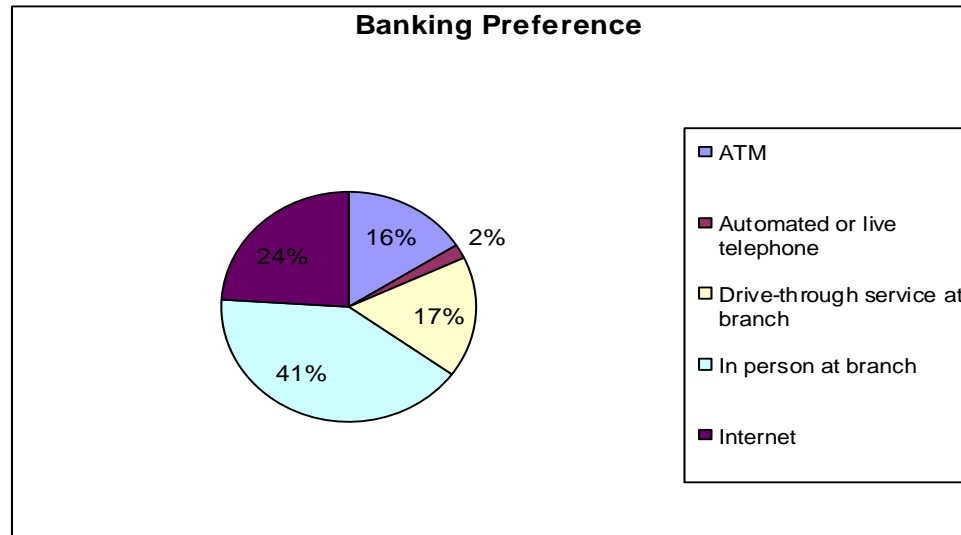

Organizing Categorical Data: Bar Chart

- In a **bar chart**, a bar shows each category, the length of which represents the amount, frequency or percentage of values falling into a category.

Organizing Categorical Data: Pie Chart

- The **pie chart** is a circle broken up into slices that represent categories. The size of each slice of the pie varies according to the percentage in each category.

Organizing Categorical Data: Pareto Chart

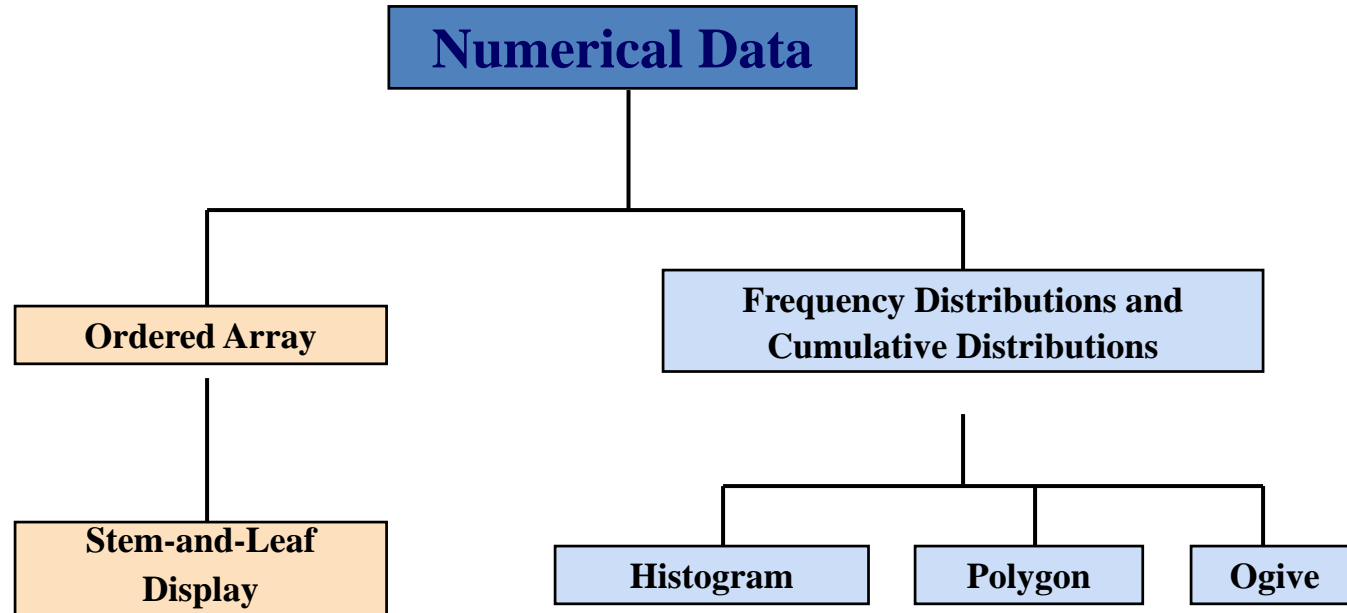

- Used to portray categorical data (nominal scale)
- **A vertical bar chart, where categories are shown in descending order of frequency**
- A **cumulative polygon** is shown in the same graph
- Used to separate the “vital few” from the “trivial many”

Organizing Categorical Data: Pareto Chart

Tables and Charts for Numerical Data

Organizing Numerical Data: Ordered Array

- An **ordered array** is a sequence of data, in rank order, from the **smallest** value to the **largest** value.
- Shows **range** (minimum value to maximum value)
- May help identify **outliers** (unusual observations)
- Which values appear **more than one**
- Divide data in **sections** (Day students- 1/3rd of data below 18, 2/3rd below 22,etc)

| Age of Surveyed College Students | Day Students | | | | | |
|---|----------------|----|----|----|----|----|
| | 16 | 17 | 17 | 18 | 18 | 18 |
| | 19 | 19 | 20 | 20 | 21 | 22 |
| | 22 | 25 | 27 | 32 | 38 | 42 |
| | Night Students | | | | | |
| | 18 | 18 | 19 | 19 | 20 | 21 |
| | 23 | 28 | 32 | 33 | 41 | 45 |
| | | | | | | |

Stem-and-Leaf Display

- A simple way to see how the data are **distributed and where concentrations** of data exist

METHOD: Separate the sorted data series into leading digits (the **stems**) and the trailing digits (the **leaves**)

Organizing Numerical Data: Stem and Leaf Display

- A **stem-and-leaf display** organizes data into groups (called stems) so that the values within each group (the leaves) branch out to the right on each row.

| Age of Surveyed College Students | Day Students | | | | | |
|----------------------------------|----------------|----|----|----|----|----|
| | 16 | 17 | 17 | 18 | 18 | 18 |
| | 19 | 19 | 20 | 20 | 21 | 22 |
| | 22 | 25 | 27 | 32 | 38 | 42 |
| | Night Students | | | | | |
| | 18 | 18 | 19 | 19 | 20 | 21 |
| | 23 | 28 | 32 | 33 | 41 | 45 |

| Age of College Students | | | |
|-------------------------|----------|----------------|------|
| Day Students | | Night Students | |
| Stem | Leaf | Stem | Leaf |
| 1 | 67788899 | 1 | 8899 |
| 2 | 0012257 | 2 | 0138 |
| 3 | 28 | 3 | 23 |
| 4 | 2 | 4 | 15 |

| Girls | | Boys |
|---------------|---|---------------|
| 7, 8, 2, 2, 1 | 1 | 5, 8 |
| 3, 3, 3, 2 | 2 | 2, 2, 3, 6 |
| 5, 4, 3 | 3 | 4, 5, 5, 5 |
| 7, 5, 4 | 4 | 0, 0, 2, 7, 9 |
| 1, 1, 0 | 5 | 0, 0, 1 |

| Stems | Leaves | | | |
|-------|--------|---|---|---|
| 10 | 4 | 7 | | |
| 11 | 2 | 5 | 5 | 6 |
| 12 | 3 | | | |
| 13 | 0 | 4 | | |
| 14 | 5 | 7 | | |

Means 145

Stem and Leaf plot for decimal numbers

| | | | | | | | | |
|-----|---|---|---|---|---|---|---|--|
| 8. | 0 | 0 | | | | | | |
| 9. | 0 | | | | | | | |
| 10. | 0 | 0 | | | | | | |
| 11. | 0 | 0 | 5 | | | | | |
| 12. | 0 | 0 | 0 | 2 | | | | |
| 13. | 2 | 5 | 8 | 8 | | | | |
| 14. | 0 | 0 | 0 | 0 | 4 | 6 | 8 | |
| 15. | 0 | 0 | 5 | | | | | |
| 16. | 0 | 2 | 6 | 8 | | | | |
| 17. | 0 | 0 | 5 | | | | | |
| 18. | 0 | 2 | 5 | | | | | |
| 19. | 0 | 5 | | | | | | |
| 20. | 0 | 5 | | | | | | |

Decimal Between
Stem and Leaf

12.3, 12.5, 13.0

Becomes

$$\begin{array}{r|l} 12 & 3, 5 \\ 13 & 0 \end{array}$$

Key: $12 \mid 3 = 12.3$ units

Decimal in
the Stem

1.23, 1.25, 1.30

Becomes

$$\begin{array}{r|l} 1.2 & 3, 5 \\ 1.3 & 0 \end{array}$$

Key: $1.2 \mid 3 = 1.23$ units

Organizing Numerical Data: Frequency Distribution

- The **frequency distribution** is a summary table in which **the data are arranged into numerically ordered classes**.
- You must give attention to selecting the appropriate *number* of **class groupings** for the table, determining a suitable *width* of a class grouping, and establishing the *boundaries* of each class grouping to avoid overlapping.
- The number of classes depends on the number of values in the data. With a **larger** number of values, typically there are **more classes**. In general, a frequency distribution should have at **least 5 but no more than 15 classes**.
- To determine the **width of a class interval**, you divide the **range** (Highest value–Lowest value) of the data by the number of class groupings desired.

Organizing Numerical Data: Frequency Distribution Example

Example: A manufacturer of insulation randomly selects 20 winter days and records the daily high temperature

24, 35, 17, 21, 24, 37, 26, 46, 58, 30, 32, 13, 12, 38, 41, 43, 44, 27, 53, 27

Organizing Numerical Data: Frequency Distribution Example

- Sort raw data in ascending order:
12, 13, 17, 21, 24, 24, 26, 27, 27, 30, 32, 35, 37, 38, 41, 43, 44, 46, 53, 58
- Find range: $58 - 12 = 46$
- Select number of classes: 5 (usually between 5 and 15)
- Compute class interval (width): 10 ($46/5$ then round up)
- Determine class boundaries (limits):
 - Class 1: 10 to less than 20
 - Class 2: 20 to less than 30
 - Class 3: 30 to less than 40
 - Class 4: 40 to less than 50
 - Class 5: 50 to less than 60
- Compute class midpoints: 15, 25, 35, 45, 55
- Count observations & assign to classes

Organizing Numerical Data: Frequency Distribution Example

Data in ordered array:

12, 13, 17, 21, 24, 24, 26, 27, 27, 30, 32, 35, 37, 38, 41, 43, 44, 46, 53, 58

| Class | Frequency | Relative Frequency | Percentage |
|---------------------|-----------|--------------------|------------|
| 10 but less than 20 | 3 | .15 | 15 |
| 20 but less than 30 | 6 | .30 | 30 |
| 30 but less than 40 | 5 | .25 | 25 |
| 40 but less than 50 | 4 | .20 | 20 |
| 50 but less than 60 | 2 | .10 | 10 |
| Total | 20 | 1.00 | 100 |

Tabulating Numerical Data: Cumulative Frequency

Data in ordered array:

12, 13, 17, 21, 24, 24, 26, 27, 27, 30, 32, 35, 37, 38, 41, 43, 44, 46, 53, 58

| Class | Frequency | Percentage | Cumulative Frequency | Cumulative Percentage |
|---------------------|-----------|------------|----------------------|-----------------------|
| 10 but less than 20 | 3 | 15 | 3 | 15 |
| 20 but less than 30 | 6 | 30 | 9 | 45 |
| 30 but less than 40 | 5 | 25 | 14 | 70 |
| 40 but less than 50 | 4 | 20 | 18 | 90 |
| 50 but less than 60 | 2 | 10 | 20 | 100 |
| Total | 20 | 100 | | |

Why Use a Frequency Distribution?

- It **condenses** the raw data into a more useful form
- It allows for a quick **visual interpretation** of the data
- It enables the determination of the major characteristics of the data set including **where the data are concentrated / clustered**

Frequency Distributions: Some Tips

- Different **class boundaries** may provide **different pictures** for the same data (especially for smaller data sets)
- **Shifts in data concentration** may show up when **different class** boundaries are chosen
- As the **size of the data set increases**, the impact of alterations in the **selection of class boundaries** is greatly reduced
- When comparing two or more groups with **different sample sizes**, you must use either a **relative frequency or a percentage distribution**

Organizing Numerical Data: The Histogram

- A **vertical bar chart** of the data in a frequency distribution is called a **histogram**.
- In a histogram there are **no gaps** between adjacent bars.
- The **class boundaries** (or **class midpoints**) are shown on the horizontal axis.
- The vertical axis is either **frequency, relative frequency, or percentage**.
- The **height** of the bars represent the **frequency, relative frequency, or percentage**.

Organizing Numerical Data: The Histogram

| Class | Frequency | Relative Frequency | Percentage |
|---------------------|-----------|--------------------|------------|
| 10 but less than 20 | 3 | .15 | 15 |
| 20 but less than 30 | 6 | .30 | 30 |
| 30 but less than 40 | 5 | .25 | 25 |
| 40 but less than 50 | 4 | .20 | 20 |
| 50 but less than 60 | 2 | .10 | 10 |
| Total | 20 | 1.00 | 100 |

(In a percentage histogram the vertical axis would be defined to show the percentage of observations per class)

Histogram: Daily High Temperature

Organizing Numerical Data: The Polygon

- A **percentage polygon** is formed by having the **midpoint of each class represent the data in that class and then connecting the sequence of midpoints** at their respective class percentages.
- The **cumulative percentage polygon**, or **ogive**, displays the variable of interest along the X axis, and the cumulative percentages along the Y axis.
- **Useful when there are two or more groups to compare.**

Graphing Numerical Data: The Frequency Polygon

| Class | Class Midpoint | Frequency |
|---------------------|-------------------|-----------|
| 10 but less than 20 | 15 | 3 |
| 20 but less than 30 | 25 | 6 |
| 30 but less than 40 | 35 | 5 |
| 40 but less than 50 | 45 | 4 |
| 50 but less than 60 | 55 | 2 |

(In a percentage polygon the **vertical axis** would be defined to show the **percentage of observations per class**)
